SUMMARY

Business systems and AI systems engineer with 8+ years building and running the CRM, billing, contract, integration and reporting systems that Sales, Finance and Customer Success teams work in, from discovery through production support. At Teem, a U.S. staffing and employer-of-record company, I was the primary technical owner of the HubSpot-centered operations stack and the sole technical implementer of five production systems, and I put a Claude-based agent into production on billing exceptions, with financial calculations and authorization kept in deterministic code. Before that, at Pipefy, an enterprise workflow-automation SaaS, I integrated the platform with 40+ systems for enterprise customers, managed integration releases from development to production and kept every customer in my portfolio while it grew.

SELECTED RESULTS

- **Billing:** rebuilt HubSpot-to-Stripe subscription billing in n8n; Finance's weekly queue fell **from 60–80 tickets to 2–3 exceptions**.
- **Applied AI in production:** a Claude Revenue Assurance Agent with staged autonomy, approval-bound writes and read-back reconciliation, in production from July 2026.
- **Revenue assurance:** a contract-to-billing audit identified **$161,615.76 a year** in contracted revenue missing from billing; Finance approved $9,528.19/month for billing.
- **Customers:** kept **every customer in my portfolio** at Pipefy while it grew, and extended GPA, one of Brazil's largest retail groups, from one team into Legal, Trading and Buying.
- **Internal tools:** a requisition app with **100% adoption** across ~20 Success Managers and a contract-change app that cut a ten-worker batch **from 90 to 5 minutes**.

TECHNICAL SKILLS

AI & agents: Claude API (Claude Sonnet 5 in production), OpenAI API, tool calling, structured outputs, prompt caching, RAG and hybrid retrieval, LLM evaluations, shadow mode, human-in-the-loop approval, policy gates, prompt-injection handling, Claude Code, OpenAI Codex.

Automation & integration: n8n (including self-hosted), Workato (recipes, Connector SDK in Ruby, API Platform, SQL Transformations, Recipe Lifecycle Management), Zapier, Python, JavaScript/Node.js, SQL, REST/GraphQL APIs, webhooks, idempotency, locking, dead-letter queues, reconciliation, retry and recovery.

Business systems: HubSpot CRM/CMS (platform owner: lifecycle stages, pipelines, custom objects, workflows, HubL templates and modules, Meetings/Scheduler API, private apps), Stripe Billing, Deel, Fountain ATS, Grain, Aloware, Airtable, Clay; Salesforce, SAP ECC, NetSuite, Workday and ServiceNow integrations.

Releases & delivery: DEV, TEST and PROD promotion, environment-specific credentials, post-deployment monitoring, recovery plans, version restores, targeted reversions and hotfixes, hybrid SaaS/on-premises connectivity; technical discovery, proofs of concept, requirements, runbooks, training and enablement.

Data & reporting: Power BI, Power Query, DAX, data modeling, metric definition, data-quality auditing, identity resolution, PostgreSQL, Supabase, SQLite, Oracle SQL, advanced Excel, Google Analytics.

Independent lab (not production): Flagsmith (self-hosted, Python SDK), Dockerfiles, Docker Compose, Kubernetes on local kind (kubectl, Kustomize, probes, rolling updates, rollback), GitHub Actions, Pytest, Playwright.

EXPERIENCE

Senior Business Operations Engineer | GTM Systems, Automation & Data Governance
Teem | U.S. healthcare staffing and employer of record | Salt Lake City, UT (Remote) *Mar 2025 – Oct 2026*
Primary technical owner of the automation and data layer behind Finance, Sales, Revenue Operations and Customer Success, and sole technical implementer of five production systems. Reported to the CEO and COO, later to the Director of Projects and then directly to the COO. Initiated most automation improvements and owned them from discovery through rollout, training and support.

- **Subscription billing.** Proposed and led the redesign of HubSpot-to-Stripe billing as two n8n workflows (~250 nodes) covering new subscriptions, price and hour changes, prorations, coupons, fees, credits, replacements and cancellations. Delivered V1 in one month and the final version in two; Finance's weekly queue fell **from 60–80 tickets to 2–3 exceptions**.
- Found during discovery that the approval-to-execution workflow had not run for eleven weeks and that intake failures raised no alerts. Added validation, idempotency, item-level locking, payload checksums, pre- and post-write reconciliation and a dead-letter queue; replayed 1,006 historical cases and raised matching accuracy **from 89.46% to 100%**.
- Recovered from production regressions with the approach each incident called for: restoring a previous n8n workflow version, reverting specific code or configuration, or publishing a hotfix, then validating the corrected workflow and the affected records. Replayed production payloads through offline Node.js harnesses before publishing.
- **Revenue Assurance Agent.** Built a production agent (Claude Sonnet 5, Anthropic API, tool calling, structured outputs) that investigated the billing exceptions still reaching Finance, reading tickets, contract clauses and HubSpot, Stripe and

Deel records and returning findings with evidence references. Fees, prorations, credits, effective dates and authorization stayed in deterministic Python and JavaScript.

- Rolled out autonomy in stages: Finance approval on every write through Microsoft Teams Adaptive Cards (July 2026), shadow evaluation against Finance decisions (August), then automatic execution for an allowlist of low-risk actions (late August). Extended the checks to closed-won deals and, with the sales team, changed the process so deal data came from the signed quote, removing mismatches at the source.
- **Contract-to-billing audit.** Used Python to compare about 1,168 signed agreements with 830 live Stripe subscriptions, producing 157 findings and identifying **$13,467.98/month** absent from billing; turned a 329-finding workbook into one decision queue ordered by financial impact.
- **Revenue and compensation model.** Consolidated HubSpot, Stripe, Deel, Airtable and a retired contract archive into the first centralized model for revenue movement and compensation across 668 clients and about **$1.85M MRR**, in Power BI, Power Query and DAX, replacing 1–1.5 weeks of monthly manual checking with an exception-based model refreshed every two hours for about 20 users.
- Audited 126 manager-months and 307 data-quality findings; traced a 3.29% team churn figure to an incorrect denominator (validated: 0.51%). Implemented the Revenue team's compensation plan in Power BI.
- **HubSpot, CMS and GTM.** Owned HubSpot architecture across properties, deals, tickets, quotes, line items, custom objects, associations, private apps and webhooks; built CMS templates, reusable modules, landing pages and email templates with HubL, HTML, CSS and JavaScript, following brand and accessibility standards; defined lifecycle stages, pipelines and lead routing by vertical.
- **Lead capture.** Built the website Cost Savings Calculator with its HubSpot qualification workflow, and a form script that kept job applicants out of the sales funnel; with RevOps dashboard visibility, qualified-lead-to-discovery conversion rose by **about 25%**. Asking for a mobile number raised delivered SMS from about 10 to about 60 a month.
- **Requisition app.** Redesigned intake after interviewing users, then built a JavaScript app (~5,100 lines, Netlify, Git deploys) and a 49-step n8n workflow into Fountain ATS that reduced four screens to one and reached **100% adoption** across ~20 Success Managers, supporting 142 hires from 119 submissions with zero duplicate openings from retries.
- **Contract-change app.** Built a HubSpot-to-Deel application that calculates pay-rate changes, creates deals, quotes and line items and triggers Deel amendments on Finance approval, cutting a ten-worker batch **from 90 to 5 minutes**. When a Deel API change broke the contract sync to HubSpot, updated the dependent flows and validated them before publishing.
- **Onboarding routing.** Built an eligibility- and capacity-aware routing layer on HubSpot Meetings, the Scheduler API, CMS/HubL and n8n, with Slack notifications and interactive rescheduling, that let the same six-person team run **8–9 onboarding calls a week, up from 4–5**, and retired nine Calendly seats ($2,160/year).
- Led four tool replacements end to end (Gong to Grain, ReferralHero to ReferralRock, Calendly to HubSpot Meetings, HubSpot charts and Looker Studio to Power BI); administered Stripe, Deel, Fountain ATS and Grain; trained every affected department and maintained runbooks, RACI and decision logs.

Senior Solutions Engineer | Enterprise Integration & Automation
Pipefy | Enterprise workflow automation SaaS | Curitiba, Brazil (Remote) *Jun 2024 – Mar 2025*

- Kept **every customer in my assigned portfolio** throughout my tenure while the portfolio grew, and drove additional license sales through technical consulting, implementations and ongoing relationships; selected to lead the Arcos Dorados project based on implementation results and customer satisfaction.
- Served as consulting engineer for GPA House, the internal agency of one of Brazil's largest retail groups, and extended a creative-team workflow into Legal, Trading and Buying across additional sites; Pipefy's published customer story reported monthly asset output rising **from 675 to 2,017**.
- Partnered with Account Executives on enterprise evaluations, leading technical discovery, tailored demonstrations and working proofs of concept on prospects' own processes, and addressing technical objections and implementation scope.
- Integrated Pipefy with **40+ systems** through Workato, including SAP ECC and S/4HANA, Salesforce, NetSuite, Workday, ServiceNow and Snowflake; built custom connectors with the Connector SDK (Ruby), HTTP actions, SQL Transformations and API recipes on the Workato API Platform.
- Managed integration releases without interrupting production: built in development, promoted with Recipe Lifecycle Management to a test environment with its own connections, tested mappings, authentication, payloads and endpoints, then promoted approved versions and monitored post-deployment jobs with a recovery plan.
- Traced a 401 in validation to a connection using the wrong environment's credentials, resolved TEST-to-PROD 403 errors with the customer's IT, and fixed a payload change that stopped ERP records by correcting the field mapping.
- Supported hybrid SaaS/on-premises connectivity at GPA, where SAP was not exposed to the cloud: configured the Workato connections through an agent the customer's IT installed and ran, and built the Workato layer of a supplier master-data integration between SAP ECC and Pipefy.
- Built an OpenAI document workflow that extracted and validated billing fields from hundreds of receipts into AP/AR, cutting about a week of work to a few hours.

Product Manager
Globalfy | U.S. platform for international founders | Orlando, FL (Remote) *Feb 2024 – Jul 2024*

- Retained as the only Business Operations team member and moved into Product during a restructure, owning LLC formation, C Corporation formation, EIN and ITIN journeys; set priorities from activation and drop-off data, usability tests and stakeholder feedback.

Senior Business Solutions Engineer
Globalfy *Apr 2023 – Feb 2024*

- Consolidated fragmented intake forms into one validated workflow, increasing completed contracts **from about 1,000 to 3,000 per semester**.

- Identified the need for, designed and built an Oracle and Pipefy integration with Zapier, Oracle SQL, Python and the Pipefy API: reciprocal record IDs between systems, existence checks and event identifiers against duplicates, retries and error paths; trained the teams that used it.
- Built a pending-items checklist, in-field instructions and item-level reminders for stalled EIN requests, and in-portal notifications with a compliance-deadline calendar for state filings.

Business Solutions Engineer
Globalfy *Apr 2022 – Apr 2023*

- Ran AS-IS/TO-BE discovery across Finance, Tax, Bookkeeping and Operations and built integrations connecting HubSpot, Stripe, QuickBooks and banking services with Zapier, Workato and Python.

Solutions Engineering & Process Consulting
Profectum | Process-automation consultancy and Pipefy partner | Fortaleza, Brazil *Aug 2019 – Apr 2022*
Pre-Sales Solutions Engineer (Apr 2021 – Apr 2022) | Post-Sales Solutions Engineer (Mar 2020 – Apr 2021) | Business Process Analyst Intern (Aug 2019 – Mar 2020)

- Led technical discovery and built proofs of concept on prospects' own processes, contributing to a **78% conversion rate** on qualified opportunities; led the technical workstream of an enterprise healthcare deal that also generated 100+ partner licenses.
- Owned onboarding, quarterly roadmaps, training and support for about three recurring clients under SLAs and lost no clients: every managed project was renewed.
- One of two engineers on the FIEC program: mapped 500+ workflows in ten weeks, automated 70 processes in three months and trained 200+ employees; the published customer story reported **151% ROI** on hours saved.

Project Manager · Business Consultant · Branding Manager
Proativa Jr. | University junior enterprise | Fortaleza, Brazil *Feb 2018 – Jul 2020*

- Delivered process-mapping, SOP and automation-readiness engagements and managed improvement projects from scoping to client acceptance.

PROJECTS

Personal projects built outside employment with personal or synthetic data; figures are engineering results, not commercial impact.

Career Agent | Local-first job intelligence application
github.com/thais-stephanie/career-agent-portfolio

- Windows application (Python 3.12, JavaScript, uv/PowerShell installer) that ingests postings from 27 sources with provenance and deduplication, keeps eligibility and scoring in deterministic code and uses Claude, OpenAI or local Ollama models only for ambiguous text, with every quote verified against the posting.
- Shipped v0.2.0-beta.3 with **11,007 passing tests** plus clean-install and upgrade checks, and held back an earlier candidate that scored 50/90 against an 80% gate.

Customer Success Engineering Lab | Feature flags, containers and CI · synthetic data

- Python/FastAPI service released through the official Flagsmith SDK on self-hosted Flagsmith, with Development and Production environments, a segment, an identity override and an off switch that works without a deploy. Not affiliated with Flagsmith.
- Dockerfile, Docker Compose and Kubernetes on local kind; 170 tests in five tiers, 7 of 7 GitHub Actions jobs; rollout, blocked bad release, rollback and pod replacement under traffic with zero failed requests.

DTC Revenue Operations Agent | Claude tool-calling agent · synthetic data
github.com/thais-stephanie/revenue-ops-agent

- SQL and Python compute the metrics; Claude investigates through four read-only tools and one proposal tool, with schema, source-reference and freshness gates, token and cost budgets, prompt caching and per-run telemetry. Validated with **305 automated tests and 14 scenario cases**, including prompt injection.

Revenue Radar | Synthetic-data RevOps prototype
github.com/thais-stephanie/revenue-radar

- Hybrid retrieval (SQLite full-text and local vectors) across CRM, billing and contract evidence, with cited passages, approvals bound to proposal hashes and deterministic policy gates; retrieval, interpretation and claim support evaluated separately.

CERTIFICATIONS

- Anthropic: Building with the Claude API (Sep 2026); AI Fluency for Builders; AI Capabilities and Limitations · HubSpot: Inbound (Sep 2026); Sales Hub, Marketing Hub and Revenue Operations (Oct 2026)
- Workato: Automation Pro I, II and III; Advanced Data Transformations; Introduction to Building Your SDK Connectors; Working with Databases; Error Troubleshooting · Boomi: Professional Integration Developer · Pipefy: API & Integrations · Zapier: Automate Your Work; Automating Lead Generation (all Feb 2025)
- Airtable Builder Certification; Glide Certification: Level 3 (Sep 2026) · LinkedIn: Enterprise Architecture in Practice (Aug 2026) · Pipefy: Process Implementation (Aug 2022) · Codecademy: Analyze Data With SQL (Aug 2023) · Six Sigma Green Belt (CSSGB), Grupo Voitto (Jan 2022)
