Summary

Senior Solutions Engineer/Architect specializing in HubSpot-centered GTM systems, with 8+ years building integrations, automation, and revenue operations workflows across CRM, billing, contracts, HRIS, and reporting. I connect these systems through n8n, Clay, Zapier, iPaaS, REST APIs, and webhooks, owning solutions end to end from requirements and architecture through implementation, testing, documentation, training, and production monitoring. Over the past 18 months, I delivered five production systems with full technical ownership.

My recent work includes HubSpot-to-Stripe subscription automation, HubSpot-to-Deel contract changes, CRM-to-ATS requisition orchestration, eligibility-based meeting routing and an auditable revenue data layer across HubSpot, Stripe, Deel, Airtable and Power BI.

Experience

Senior Business Operations Engineer | GTM Systems & Automation

Teem LLC, Salt Lake, Utah, USA (remote)

Mar 2025 — Sep 2026

- Rebuilt the HubSpot to Stripe subscription pipeline as two n8n workflows totaling 250 nodes, covering new clients, price changes, prorations, credits, replacements and cancellations, with reconciliation, idempotency, locking and failure controls. Finance's weekly queue went from 60-80 tickets to 2-3 exceptions.
- Created the contract-to-billing reconciliation layer that did not previously exist. Its first review identified 157 issues including contracted revenue never billed, duplicate charges and missing fees, all investigated with Finance.
- Built a requisition builder turning HubSpot onboarding tickets into Fountain job openings: 119 submissions, 142 hires, 100% team adoption, twelve manually entered fields reduced to zero. Roughly 5,100 lines of JavaScript over a 49-step n8n orchestration, deployed on Netlify with continuous deployment from Git.
- Designed an assignment and routing engine on HubSpot Meetings, Scheduler API and CMS after establishing that native round robin distributes on calendar availability but cannot express eligibility. Weekly call volume doubled on the same team, and retiring the replaced tool removed \$2,160 a year in license cost.
- Shipped a second Netlify-hosted internal app for roster-wide pay rate changes, creating the HubSpot records, holding them behind a Finance approval gate, then writing Deel contract amendments. Ten-person batches went from 90 minutes to 5, with zero calculation errors since launch.
- Built the first centralized Power BI model for revenue movement across HubSpot, Stripe, Deel and Airtable, then audited it: 126 manager-months verified and 307 data quality findings documented.
- Led requirements gathering with Finance, Sales and Customer Success; maintained the RACI, decision log, technical documentation and training material; cataloged and fixed 188 defects.

Senior Solutions Engineer

Pipefy, Curitiba, PR, Brazil (remote)

Jun 2024 — Mar 2025

- Supported mid-market and enterprise sales cycles through technical discovery, solution architecture, integration design, demos and Proof of Concept development.
- Designed and implemented workflow automations in Workato and Python, replacing spreadsheet-based processes with automated data flows across client operations.
- Architected integrations connecting Pipefy with ERPs (SAP, NetSuite), CRMs (Salesforce, HubSpot), HRIS (Workday, Deel) and e-commerce platforms via REST and GraphQL APIs.
- Consulting engineer on the GPA House account, the in-house agency of a 50,000-employee retail group. Expanded a workflow proven with the creative team into Legal, Trading and Buying, rolled it out to additional sites, redesigned existing flows and integrated adjacent systems. Pipefy published the account as a customer story, reporting monthly asset output up from 675 to 2,017.
- Built an AI-powered workflow that processed hundreds of uploaded receipts, extracted and validated the required billing fields, and prepared the resulting records for vendor processing, reducing a week-long AP/AR workload to a few hours and enabling same-day completion.

Product Manager

Globalfy LLC, Orlando, FL, USA / Remote

Feb 2024 — Jul 2024

- Moved into product when the BizOps function was wound down and I was the only team member retained.
- Owned requirements and discovery for incorporation and compliance workflows covering LLC, C Corporation, EIN, and ITIN.
- Instrumented the product with Google Analytics and SQL to measure user behavior and prioritize the roadmap.

Business Solutions Engineer

Globalfy LLC, Orlando, FL, USA / Remote

Apr 2023 — Feb 2024

- Built Zapier and HubSpot workflows that reduced document generation from approximately one hour to two minutes.

- Replaced fragmented hiring forms with a unified intake, tripling completed contract volume from approximately 1,000 to 3,000 per semester.

Business Solutions Engineer

Globalfy LLC, Orlando, FL, USA / Remote

Apr 2022 — Apr 2023

- Built automation and API integrations connecting HubSpot, Stripe, QuickBooks, and banking services using Zapier, Workato, and Python.

Pre-Sales Solutions Engineer

Profectum Tecnologia, Fortaleza, Brazil

Apr 2021 — Apr 2022

- Designed and delivered custom Proof of Concepts mapped to each client's real workflow, converting 78% of qualified leads into signed consulting contracts.
- Led the technical side of the negotiation that closed a consulting engagement with a major healthcare group, which also drove 100+ licenses of a partner SaaS product.

Post-Sales Solutions Engineer

Profectum Tecnologia, Fortaleza, Brazil

Mar 2020 — Apr 2021

- Delivered the FIEC automation program as one of two engineers on a three-person Profectum team, for a state industry federation of 1,375 employees: ten weeks mapping 500+ internal flows, then 70 processes automated in three months across HR, Legal, Accounting, Supply Chain, Finance and Engineering, giving 200+ staff autonomy without IT. Published as a customer story by Pipefy and Profectum at 151% ROI.
- Ran a full process mapping and efficiency analysis for an insurance company; the client credited the project with roughly R\$1 million in savings.

Business Process Analyst Intern

Profectum Tecnologia, Fortaleza, Brazil

Aug 2019 — Mar 2020

- Mapped client processes across several industries, identified operational risks and improvement opportunities, built the automations in Zapier, and evaluated and recommended software for each client's situation.

Education

Bachelor of Business Administration, Jan 2018 — Jan 2023

Universidade Federal do Ceará (UFC)

Skills

- **GTM Systems, Revenue Systems, Business Systems, Revenue Operations, CRM Architecture, Data Governance**
- **HubSpot CRM and CMS, Custom Objects, Associations, Data Modeling, Workflows, Meeting Scheduler API, HubL**
- **Salesforce, n8n, Workato, Zapier, Clay, iPaaS, Systems Integration, REST and GraphQL APIs, Webhooks**
- **Intelligent Document Processing (IDP), AI-Powered Data Extraction, AI Chatbots, Knowledge-Based AI Assistants, AI Workflow Automation, Claude Code**
- **Requirements Gathering, Process Mapping, Solution Architecture, Technical Documentation, Testing, Production Monitoring**
- **JavaScript, Node.js, Python, SQL, Idempotency, Error Handling, Dead-Letter Queues, Data Reconciliation**
- **Stripe Billing, Deel, Airtable, Supabase, Power BI, Netlify, Git and CI/CD**

Languages

Portuguese Native • English Advanced • Spanish Intermediate

Certifications and Licenses

- Workato: Automation Pro I, II and III
- Workato: Advanced Data Transformations
- Workato: API and SDK Connector Development
- Boomi: Professional Integration Developer
- Zapier: Automate Your Work
- Claude Academy: AI Fluency for Builders, AI Capabilities and Limitations, Introduction to Claude Cowork
