Summary

AI Agent & Automation Engineer with 8+ years building internal tools, integrations, workflow automation and business systems across Revenue Operations, Finance, Customer Success and Operations. Hands-on with Claude and LLM workflows, AI agents, tool/function calling, HubSpot, Slack integrations, n8n, Zapier, Workato, Python, JavaScript/Node.js, SQL, REST APIs and webhooks.

Built and operated production systems spanning CRM workflows, subscription billing, reconciliation, revenue reporting and AI-enabled automation, including a HubSpot-to-Stripe billing pipeline that reduced Finance's weekly queue from 60–80 tickets to 1–3 exceptions. Own solutions end to end from process discovery and architecture through implementation, testing, monitoring, documentation, stakeholder enablement and production support. Currently building and evaluating local-first AI systems using deterministic business logic, constrained tools, guardrails, human review and reproducible evals.

Experience

Senior Business Operations Engineer | GTM Systems & Automation

Teem, Salt Lake, Utah, US | Remote

Mar 2025 — Sep 2026

U.S.-based remote staffing company with operations spanning subscription billing, workforce contracts, recruiting, payroll and revenue reporting.

Owned the internal automation layer across **HubSpot, Stripe, Deel, Airtable, Slack and n8n**, supporting Finance, Revenue Operations and Customer Success from requirements and architecture through implementation, production monitoring, troubleshooting and user enablement.

- Rebuilt the **HubSpot-to-Stripe subscription lifecycle** as two n8n workflows totaling ~250 nodes, covering pricing changes, proration, credits, replacements and cancellations with reconciliation, idempotency, locking and explicit failure paths; reduced Finance's weekly queue from **60–80 tickets to 1–3 exceptions**.
- Built a **contract-to-billing reconciliation and revenue assurance layer** that surfaced 157 issues including contracted revenue not billed, duplicate charges, incorrect mappings and missing fees, turning inconsistent business data into actionable exceptions for Finance.
- Built an internal compensation-change application across **HubSpot, Deel and Finance approval workflows**, reducing a 10-worker batch from **90 minutes to 5** with zero calculation errors after launch.
- Designed an eligibility-aware routing system across **HubSpot Meetings, Scheduler API, CMS and n8n**, replacing native round-robin limitations with business-rule-driven assignment and doubling weekly call capacity on the same team.
- Built and audited the first centralized revenue and compensation model across **HubSpot, Stripe, Deel and Airtable**, covering ~668 active clients and ~\$1.85M MRR; documented 307 data-quality findings and corrected a churn defect from 3.29% to 0.51%.
- Used **Python, JavaScript, SQL, REST APIs and webhooks** for data investigation, reconciliation and workflow logic while owning production testing, monitoring, documentation, data governance and user support.

Senior Solutions Engineer | Enterprise Automation & Integration

Pipefy, Curitiba, PR, Brazil | Remote

Jun 2024 — Mar 2025

Enterprise workflow automation SaaS supporting mid-market and enterprise teams across CRM, ERP, HRIS, ecommerce and operational systems.

- Built an **AI-powered financial document workflow** that processed hundreds of receipts, extracted and validated billing data, and reduced an AP/AR workload from roughly **one week to a few hours**.
- Designed enterprise automations and integrations using **Workato, Python, REST/GraphQL APIs and Slack-connected workflows** across HubSpot, Salesforce, SAP, NetSuite, Workday and ecommerce systems.
- Led technical discovery with business stakeholders, translating ambiguous operational problems into production-ready automation and integration designs.

Independent AI Systems Engineer | AI Agents & Automation

Personal Projects

Aug 2026 — Current

- Building and evaluating **AI agents and local-first AI systems** using Python, TypeScript/JavaScript, PostgreSQL/Supabase, LLMs, RAG and tool/function calling, with deterministic business logic, structured outputs, guardrails and reproducible evaluations.
- Built **Career Agent**, a local-first job intelligence platform combining multi-source ingestion, deterministic eligibility and lifecycle rules, LLM interpretation of unstructured job text, evidence-backed recommendations, regression tests and release gates.
- Building **DTC Revenue Operations Agent**, a Claude-based internal RevOps agent for a synthetic portfolio of 30 ecommerce brands, combining Python/SQL signal detection with constrained tools, human approval boundaries and evals for attribution conflicts, stale data, prompt injection and ambiguous business signals.

Product Manager | Financial Operations, Compliance & Automation

Globalfy, Orlando, FL, US | Remote

Feb 2024 — Jul 2024

U.S. business operations platform supporting international founders with company formation, Tax, Bookkeeping, compliance, banking and financial services.

- Owned discovery and product requirements for workflows supporting **U.S. incorporation, Tax, Bookkeeping, Finance and compliance**, including LLC/C-Corp formation, EIN and ITIN journeys.

- Mapped AS-IS and designed TO-BE processes with Tax, Bookkeeping, Finance and Operations teams, translating business and regulatory rules into system validations and workflow controls.
- Worked across **QuickBooks, Stripe, banking services, SQL and APIs**, supporting financial integrations, operational data flows and analysis of process bottlenecks and product performance.

Senior Business Solutions Engineer | Financial Operations Automation

Globalfy Apr 2023 — Feb 2024

- Designed automation across **Tax, Bookkeeping, Finance, accounts payable and internal operations**, replacing manual handoffs and spreadsheet-based processes with structured workflows.
- Helped centralize operational and financial data in **Oracle Database**, working with **SQL, data mappings, validation and cross-system data flows**.
- Integrated QuickBooks, Pipefy, DocuSign, Jotform and other systems through APIs and webhooks, consolidating fragmented customer and financial records.
- Embedded U.S. compliance requirements and exception handling directly into operational workflows.
- Increased completed contract volume from ~1,000 to ~3,000 per semester through a redesigned automated intake process.

Business Solutions Engineer | Process & Data Automation

Globalfy Apr 2022 — Apr 2023

- Led AS-IS/TO-BE process discovery across Finance, Tax, Bookkeeping and Operations, documenting handoffs, controls, exceptions and data requirements.
- Partnered with Engineering on Workato/Zapier automations and database-backed workflows, introducing structured data collection and governance practices.
- Worked with relational data and SQL as operational processes moved from fragmented spreadsheets toward centralized Oracle-backed data flows.

(Earlier Experience) Business Process Analyst → Post-Sales Solutions Engineer → Pre-Sales Solutions Engineer

Profectum Tecnologia, Fortaleza, Brazil Aug 2019 — Apr 2022

- (Process automation consultancy delivering enterprise workflow redesign, systems implementation and operational improvement programs.)*
- Progressed from process analysis to technical consulting, delivering workflow automation across Finance, HR, Legal and Operations; helped automate **70 processes for 200+ users** in a program published at **151% ROI**.
 - Designed technical POCs that contributed to a **78% conversion rate** on qualified consulting opportunities.

Education

Bachelor of Business Administration, Jan 2018 — Jan 2023
Universidade Federal do Ceará (UFC)

Skills

- **AI Agents & LLM Systems:** Claude, LLM APIs, AI Agents, Tool / Function Calling, Agent Workflows, Prompt Design, Structured Output, RAG, Context Management, Evaluations, Guardrails, Human-in-the-Loop
- **Automation & Integration:** n8n, Zapier, Workato, Python, JavaScript / Node.js, REST APIs, GraphQL, Webhooks, Event-Driven Workflows, Slack Integrations
- **CRM & Revenue Systems:** HubSpot CRM & CMS, Stripe Billing, QuickBooks, Deel, Airtable, Salesforce, Shopify Integrations, Revenue Operations, Subscription Billing, CRM Data Quality
- **Data & Analytics:** SQL, Power BI, DAX, Power Query, Supabase / PostgreSQL, Oracle Database, Data Modeling, Data Reconciliation, Data Validation
- **Reliability & Delivery:** Idempotency, Error Handling, Retry & Failure Recovery, Production Monitoring, Troubleshooting, Automated Testing, Technical Documentation, Solution Architecture, Requirements Gathering, Stakeholder Management

Languages

Portuguese Native • English Proficient • Spanish Intermediate

Certifications and Licenses

- **Workato:** Automation Pro I, II and III / Advanced Data Transformations / API and SDK Connector Development
- **Zapier:** Automate Your Work
- **Claude Academy:** Building with the Claude API, AI Fluency for Builders, AI Capabilities and Limitations
- **Codecademy:** Analyze Data with SQL and Python
