SUMMARY

AI systems and automation engineer with 8+ years building the CRM, billing, contract and reporting systems that Revenue, Finance and Customer Success teams run on, from discovery and architecture through deployment, training and production support. At Teem, a U.S. healthcare staffing company, I was the primary technical owner of the HubSpot-centered GTM and operations stack and worked with the CEO and COO on priorities. I rebuilt subscription billing, audited contracts against live billing and put a Claude-based agent into production to investigate the remaining billing exceptions, with money and authorization kept in deterministic code. Before Teem, I architected enterprise integrations at Pipefy, built business systems and owned product journeys at Globalfy, and worked in pre- and post-sales solutions engineering at Profectum.

SELECTED RESULTS

- **Billing:** rebuilt HubSpot-to-Stripe subscription billing in n8n; Finance's weekly queue fell **from 60–80 tickets to 2–3 exceptions**.
- **Revenue assurance:** a contract-to-billing audit found **$161,615.76 a year** in contracted revenue missing from billing; Finance approved $9,528.19/month for billing.
- **Applied AI in production:** a Claude Revenue Assurance Agent with staged autonomy, approval-bound writes and read-back reconciliation, in production from July 2026.
- **Internal tools:** a requisition app with **100% adoption across ~20 Success Managers** and a contract-change app that cut a ten-worker batch **from 90 to 5 minutes**.
- **Revenue data:** the company's first centralized revenue and compensation model, covering **668 clients and about $1.85M MRR**, refreshed every two hours.

TECHNICAL SKILLS

AI & agents: Claude API (Claude Sonnet 5 in production), OpenAI API, tool calling, structured outputs, prompt caching, RAG and hybrid retrieval, LLM evaluations, shadow mode, human-in-the-loop approval, policy gates, prompt-injection handling, Claude Code, OpenAI Codex.

Automation & integration: n8n (including self-hosted), Workato, Zapier, Make (prototypes), Python, JavaScript/Node.js (AI-assisted development), SQL, REST/GraphQL APIs, webhooks, idempotency, locking, dead-letter queues, reconciliation, retry and recovery.

Business systems: HubSpot CRM/CMS (platform owner: lifecycle stages, pipelines, custom objects, forms, nurture, sequences, Meetings/Scheduler API, private apps), Stripe Billing, Deel, Fountain ATS, Grain, Aloware, Airtable, Clay, QuickBooks; Salesforce, SAP, NetSuite and Workday integrations.

Data & reporting: Power BI, Power Query, DAX, data modeling, metric definition, data-quality auditing, identity resolution, PostgreSQL, Supabase, SQLite, advanced Excel, Google Analytics.

Delivery: technical discovery, AS-IS/TO-BE mapping, requirements and acceptance criteria, proofs of concept, software evaluation, RACI, decision logs, runbooks, training and enablement.

EXPERIENCE

Senior Business Operations Engineer | GTM Systems, Automation & Data Governance
Teem | U.S. healthcare staffing and employer of record | Salt Lake City, UT (Remote) *Mar 2025 – Oct 2026*
Primary technical owner of the automation and data layer behind Finance, Sales, Revenue Operations and Customer Success. Reported to the CEO and COO, later to the Director of Projects and then directly to the COO. Initiated most automation improvements and owned them from discovery through rollout, training and support.

- **Subscription billing.** Proposed and led the redesign of HubSpot-to-Stripe billing as two n8n workflows (~250 nodes) covering new subscriptions, price and hour changes, prorations, coupons, fees, credits, replacements and cancellations. Delivered V1 in one month and the final version in two; Finance's weekly queue fell **from 60–80 tickets to 2–3 exceptions**.
- Found during discovery that the approval-to-execution workflow had not run for eleven weeks and that intake failures raised no alerts. Added validation, idempotency, item-level locking, payload checksums, pre- and post-write reconciliation and a dead-letter queue; replayed **1,006 historical cases** and raised matching accuracy from 89.46% to 100%. In one audited week, the failure-path workflows ran **4,972 executions with zero execution errors**.
- **Revenue Assurance Agent.** Built a production agent (Claude Sonnet 5, Anthropic API, tool calling, structured outputs) that investigated the billing exceptions still reaching Finance, reading tickets, contract clauses and HubSpot, Stripe and Deel records and returning findings with evidence references. Fees, prorations, credits, effective dates and authorization stayed in deterministic Python and JavaScript.
- Rolled out autonomy in stages: Finance approval on every write through Microsoft Teams Adaptive Cards (July 2026), shadow evaluation against Finance decisions by an independent model call with isolated context (August), then automatic execution for an allowlist of low-risk actions (late August). Bound approvals to a hash of the action payload, revalidated state before every write and closed cases only after read-back reconciliation.

- **Contract-to-billing audit.** Used Python to compare about **1,168 signed agreements** with 830 live Stripe subscriptions, producing **157 findings** (unbilled revenue, duplicate charges, incorrect mappings, missing fees) and identifying **$13,467.98/month** absent from billing. Turned a 329-finding workbook into one decision queue ordered by financial impact; an independent auditor agreed with stored mappings in 96.7% of 783 cases.
- **Revenue and compensation model.** Consolidated HubSpot, Stripe, Deel, Airtable and a retired contract archive into the first centralized model for revenue movement and compensation, reconstructing ~7,000 tickets, 2,000 deals and 2,800 contracts across **668 clients, 892 placed professionals and about $1.85M MRR**. Built it in Power BI, Power Query and DAX, replacing **1–1.5 weeks of monthly manual checking** with an exception-based model refreshed every two hours for about 20 users.
- Audited 126 manager-months and classified **307 data-quality findings**; after a team restructure, traced a team churn figure of 3.29% to an incorrect denominator (validated: **0.51%**), a difference that affected compensation decisions.
- Implemented the Revenue team's compensation plan in Power BI, organizing its data sources, normalization and calculations: FTE placements closed and live against monthly targets, qualified leads by source (Business Development/Partnerships, Events, Marketing) and lead-to-discovery-to-win conversion. Built pipeline reports on deal inactivity, time in stage and forecast, and Power BI models for Customer Success, Talent Acquisition and Sales.
- **HubSpot and GTM.** Owned HubSpot architecture across properties, deals, tickets, quotes, line items, custom objects, associations, CMS/HubL, private apps and webhooks. Defined lifecycle stages and transition criteria, pipelines, owner assignment and follow-up tasks; built forms, nurture, campaign tracking, segmented lists and sequences.
- Built an AI-assisted identity-resolution and enrichment workflow in n8n that used an LLM to interpret ambiguous email signatures and company affiliations, validated recommendations before HubSpot updates, flagged likely duplicates and verified associations after each write.
- **Requisition app.** Redesigned intake after interviewing users, then built a JavaScript app (~5,100 lines, Netlify, Git deploys) and a 49-step n8n workflow into Fountain ATS that removed 12 manual fields, reduced four screens to one and reached **100% adoption across ~20 Success Managers**, supporting 142 hires from 119 submissions with zero duplicate openings from retries.
- **Contract-change app.** Built a HubSpot-to-Deel application that calculates pay-rate changes, creates deals, quotes and line items and triggers Deel amendments on Finance approval, cutting a ten-worker batch **from 90 to 5 minutes**; replaced a legacy 168-hour divisor with the approved 174-hour model.
- **Onboarding routing.** After identifying eligibility limits in HubSpot's native round robin, built an eligibility- and capacity-aware routing layer (HubSpot Meetings, Scheduler API, CMS/HubL, n8n) that let the same six-person team run **8–9 onboarding calls a week, up from 4–5**, and retired nine Calendly seats ($2,160/year).
- Led four tool replacements end to end: Gong to Grain (evaluated Fireflies, Avoma and Grain), ReferralHero to ReferralRock, Calendly to HubSpot Meetings, and HubSpot charts and Looker Studio to Power BI. Administered Stripe, Deel, Fountain ATS and Grain, and managed Aloware for ~20 users.
- Implemented self-hosted n8n and maintained self-built and inherited automations through staff transitions. Ran process-health checks, quarterly improvement reviews and a team feedback form; maintained RACI, decision logs, runbooks and training for every affected department.

Senior Solutions Engineer | Enterprise Integration & Automation
Pipefy | Enterprise workflow automation SaaS | Curitiba, Brazil (Remote) *Jun 2024 – Mar 2025*

- Partnered with Account Executives on enterprise evaluations, leading technical discovery, tailored demonstrations and working proofs of concept, and addressing technical objections and implementation scope.
- Architected integrations between Pipefy and SAP, NetSuite, Salesforce, HubSpot, Workday, Deel, Shopify and Magento through Workato, Python and REST/GraphQL APIs; built and maintained Salesforce integrations in Workato.
- Built an **OpenAI-powered document workflow** that extracted and validated billing fields from hundreds of receipts and routed them into AP/AR, reducing **about a week of work to a few hours**.
- Configured **Clay** enrichment tables and AI research for supplier qualification at a major Brazilian retail group, routing incomplete or conflicting findings to human review. Served as consulting engineer for GPA House; Pipefy's published customer story reported monthly asset output rising **from 675 to 2,017**.
- Took over customer integrations when consulting ownership changed, developed an internal policy assistant for natural-language procedure questions and earned 11 technical certifications in February 2025.

Product Manager
Globalfy | U.S. business operations platform for international founders | Orlando, FL (Remote) *Feb 2024 – Jul 2024*

- Retained as the only Business Operations team member and moved into Product during a restructure, owning **LLC formation, C Corporation formation, EIN and ITIN** journeys. Translated Tax, Bookkeeping, Finance and Operations rules into product flows, validations and acceptance criteria, using SQL, Google Analytics and usability tests to set priorities.

Senior Business Solutions Engineer
Globalfy *Apr 2023 – Feb 2024*

- Consolidated fragmented intake forms into one validated workflow, increasing completed contracts **from about 1,000 to 3,000 per semester**.
- Traced LLC-formation drop-off to the state-selection step and defined requirements and standardized state information for Engineering's redesign. Built a pending-items checklist, in-field instructions and item-level reminders for stalled EIN requests, and in-portal notifications with a compliance-deadline calendar for state filings.
- Configured HubSpot lifecycle stages, pipelines, owner assignment, forms, nurture, campaign tracking, lists and sequences, with conversion, forecast and stage-duration reporting.

- Automated tax-document population and e-signature routing (**75 to 15 minutes** per client, with analyst review) and document generation (one hour to two minutes). Resolved customer identity across Pipefy, QuickBooks, DocuSign and Jotform into one view of services, history and recurring revenue.

Business Solutions Engineer
Globalfy *Apr 2022 – Apr 2023*
- Ran AS-IS/TO-BE discovery across Finance, Tax, Bookkeeping and Operations and built integrations connecting HubSpot, Stripe, QuickBooks and banking services with Zapier, Workato and Python, introducing field definitions and source ownership as work moved from spreadsheets to database-backed workflows.

Solutions Engineering & Process Consulting
Profectum Tecnologia | *Pipefy implementation partner* | *Fortaleza, Brazil* *Aug 2019 – Apr 2022*
Pre-Sales Solutions Engineer (Apr 2021 – Apr 2022) | Post-Sales Solutions Engineer (Mar 2020 – Apr 2021) | Business Process Analyst Intern (Aug 2019 – Mar 2020)
- Led technical discovery and built proofs of concept on prospects' own processes, contributing to a **78% conversion rate** on qualified opportunities; led the technical workstream of an enterprise healthcare deal that also generated 100+ partner licenses.
- Managed onboarding, quarterly roadmaps and support for about three recurring clients under contracts and SLAs, measured by implementation success, client satisfaction, upsell and renewal.
- One of two engineers on the **FIEC** program: mapped 500+ workflows in ten weeks, automated **70 processes in three months** and trained 200+ employees; the published customer story reported **151% ROI** on hours saved. Redesigned an insurer's processes; the client attributed about R$1 million in savings.

Project Manager · Business Consultant · Branding Manager
Proativa Jr. | *University junior enterprise* | *Fortaleza, Brazil* *Feb 2018 – Jul 2020*
- Delivered process-mapping, SOP and automation-readiness engagements and managed improvement projects from scoping to client acceptance.

PROJECTS

Personal projects built outside employment with personal or synthetic data; figures are engineering results, not commercial impact.

Career Agent | Local-first job intelligence application · Aug 2026 – present
github.com/thais-stephanie/career-agent-portfolio
- Windows application (Python 3.12, JavaScript, uv/PowerShell installer) that ingests postings from **27 sources** with provenance and deduplication, keeps eligibility and scoring in deterministic code and uses Claude, OpenAI or local Ollama models only for ambiguous text, with every quote verified against the posting.
- Shipped v0.2.0-beta.3 with **11,007 passing tests** plus clean-install and upgrade checks, and held back an earlier candidate that scored 50/90 against an 80% gate.

DTC Revenue Operations Agent | Claude tool-calling agent · synthetic data
github.com/thais-stephanie/revenue-ops-agent
- SQL and Python compute the metrics; Claude investigates through four read-only tools and one proposal tool, with schema, source-reference and freshness gates, token and cost budgets, prompt caching and per-run telemetry. Validated with **305 automated tests and 14 scenario cases**, including prompt injection.

Revenue Radar | Synthetic-data RevOps prototype
github.com/thais-stephanie/revenue-radar
- Hybrid retrieval (SQLite full-text and local vectors) across CRM, billing and contract evidence, with cited passages, approvals bound to proposal hashes and deterministic policy gates; retrieval, interpretation and claim support evaluated separately.

Weekly Account Check | Account-slowdown monitor
- Ranks account slowdowns into Slack briefs with deterministic flags and routing and quote-verified model reading; scored 26 correct, 3 partly correct and 4 incorrect in a blind run on 33 new accounts.

CERTIFICATIONS

- **Anthropic / Claude Academy:** Building with the Claude API; AI Fluency for Builders; AI Capabilities and Limitations; Introduction to Claude Cowork (Sep 2026)
- **Workato:** Automation Pro I, II and III; Advanced Data Transformations; SDK Connectors; Working with Databases; Error Troubleshooting (Feb 2025) · **Boomi:** Professional Integration Developer (Feb 2025)
- **Pipefy:** API & Integrations (Feb 2025); Process Implementation (Aug 2022) · **Zapier:** Automate Your Work; Automating Lead Generation (Feb 2025)
- **Airtable** Builder and **Glide** Levels 1–3 (Sep 2026) · **LinkedIn Learning:** Enterprise Architecture in Practice (Aug 2026) · **Codecademy:** Analyze Data with SQL and Python (Aug 2023) · **Six Sigma** Green Belt (2022)

EDUCATION AND LANGUAGES

Bachelor of Business Administration, Universidade Federal do Ceará (UFC), Fortaleza, Brazil | 2018 – 2023

Languages: Portuguese (native) | English (advanced, full professional working proficiency) | Spanish (intermediate)
